

## **Database Administrator**

### **Education**

4 Year Degree or Higher, with exceptions, and a major in Computer Science is preferred.

### **Position Description**

This individual is responsible for providing day-to-day support for our production Oracle 11G RAC platform and as such is responsible for investigating and troubleshooting potential problems and issues. This individual must monitor database events and proactively optimize system performance in addition to supporting our team of software developers by working with them to achieve performance results that are consistently excellent. This individual will be accountable for maintaining all aspects of the database infrastructure according to industry best practices, and must understand functionality, scalability, performance, security, and integration requirements of our applications from the database perspective. This individual must have detailed SQL knowledge and be able to troubleshoot performance problems quickly and accurately. This individual must have basic Linux system administration skills and know how to care for the underlying operating system as well.

### **Technical Skills**

Must have a minimum of three years experience working as a senior Oracle DBA in a large clustered environment. Must have at least 3 years of experience administering databases in a junior capacity. Experience with Maximum Availability Architecture (MAA) and/or Highly Available (HA) configurations required.

Grid Infrastructure and ASM storage management is also required.

- Oracle RAC and Data Guard (MAA)
- Data Guard
- Grid Infrastructure and ASM
- Enterprise Manager

Oracle Certification(s)

- 10g/11g OCP or better (required)
- RAC Expert or Linux Expert (desired)

### **Other Skills**

Strong written communications skills. Writing sample must be provided.
