

## Windows Network Administrator

### Education

B.S. in Computer Science or related field. Cisco CCNA, Microsoft MCSE desirable.

### Description

Successful candidate is part of the infrastructure team responsible for Windows network administration, including:

- Windows domain administration, including DNS management
- Exchange administration
- Backups
- Security
- Firewall management
- Complex TCP/IP routing across multiple sites and to the Internet.

Must have the ability to communicate effectively with all levels of the organization, as well as handle network-down situations quickly and effectively.

Must be available for on call rotation, as well as 11:30 PM – 3:30 AM Monday evenings when necessary for routine system maintenance.

### Experience

- Network administration and troubleshooting experience in a multi-domain Windows 2003 environment. Experience with migrating users between domains.
- Experience configuring, administering, upgrading and troubleshooting Exchange 2003 and 2007. Experience with Blackberry Enterprise Server is a plus. Must have experience supporting and troubleshooting Exchange information over a variety of mobile devices.
- Experience configuring and troubleshooting Cisco IOS based routers and switches, including VLAN management, OSPF, BGP routing.
- Experience configuring and maintaining Cisco PIX/ASA firewalls. Must have experience in configuring and troubleshooting IPsec VPN connections, and in managing firewall failover both between devices and between physical sites.
- Experience setting up Windows in a VMWare Infrastructure environment
- Ability to work independently in a fast-paced environment, with constant communication with infrastructure team, including VP Infrastructure, support technicians, Linux administrators, Database administrators, and Mgr of Security.

### Location

Candidate may work remotely, or work on site in Deerfield Beach, FL or Indianapolis, IN.
