

DRA tool™

Sentry provides the **DRA Tool™** to assist your organization in maintaining compliance to this detailed new requirement.

Automation Eases the Burden

The DRA Tool™ automatically solve the incredible challenge of mapping over 6,000 J-Codes and Q-Codes to the correct NDC that was previously purchased, recording the correct acquisition cost (if applicable), and converting the units to the correct billing units.

The DRA Tool™ focuses your attention on those exceptions that occur, and monitors your operations to alert you to claims and billing events that require further attention.

Avoid Common Pitfalls with the DRA Tool™

Errors can be costly, and can occur in several key areas:

- An NDC can be reported on a claim for a drug that your institution never purchased.
- An NDC can be reported on a claim for a drug that was never dispensed to that particular patient.
- The incorrect billing amount (or acquisition cost extension) could be reported due to an outdated or inaccurate Charge Description Master.
- Even if these errors don't occur, an entity fail to maintain adequate records which prove compliance in the event of an audit, thus exposing an entity to unnecessary and time consuming risk.

Each of these issues can be caught as exceptions by the DRA Tool™ and further examined by staff using a combination of actionable reports and alerts.

Unique DRA Tool™ Advantages

- The DRA Tool™ provides full visibility to your environment, and seamlessly stitches together all requirements into a real time, highly visible audit trail.
- Documented Policies and Procedures are digitally enforced by an advanced compliance rules engine.
- Provides true tracking of multiple Drug Charges (dispensations) to multiple Drug Purchases (NDCs) via the Formulary Matrix.
- Adds the correct NDC and quantity to the Medicaid 837 (or other format) claim automatically.
- Proactive alerts focus a user's attention on billing exceptions or issues.
- Web delivered, lightweight, secure application is accessible and easy-to-use.
- As regulations and requirements are updated, reconfiguration is simple and accomplished by updating rules, not costly application reconfiguration.
- Can accommodate multiple locations, charge masters, wholesaler accounts, and inventories.
